Author Index

Anderson, R. M.	Effect of environment on drop-outs in rotary head–tape drives	349–363
Baugh, E.	Full-field interferometric measurement of head–tape contact spacing	289–292
Bhusan, B.	Degradation of perfluoropolyether lubricants on magnetic recording disks during sliding	279–288
Bhusan, B.	Effect of environmental humidity on the friction/stiction and durability of lubricated magnetic thin-film disks	295–301
Bhusan, B.	Effect of environment on drop-outs in rotary head–tape drives	349–363
Bhusan, B.	Friction and durability of ceramic slider materials in contact with lubricated thin-film rigid disks	303–316
Bhusan, B.	Friction, wear and magnetic performance of metal evaporated and particulate magnetic tapes	327–348
Bhusan, B.	*In situ* instrumentation for localized wear studies of magnetic thin-film disks	249–262
Bhusan, B.	Microtribological properties of hard amorphous carbon protective coatings for thin-film magnetic disks and heads	365–372
Blouët, J.	The hydrodynamic phase of gearbox synchromesh operation: the influence of radial and circumferential grooves	107–116
Bohan, M. F. J.	An investigation of the hydrodynamic and mechanical behaviour of a soft nip rolling contact	37–49
Capone, G.	On the friction–position control relationship	129–137
Chou, C. C.	Tribological effects of roughness and running-in on oil-lubricated line contacts	209–222
Claypole, T. C.	An investigation of the hydrodynamic and mechanical behaviour of a soft nip rolling contact	37–49
D'Agostino, V.	On the friction–position control relationship	129–137
della Valle, S.	On the friction–position control relationship	129–137
Forehand, S. M.	*In situ* instrumentation for localized wear studies of magnetic thin-film disks	249–262
Gethin, D. T.	An investigation of the hydrodynamic and mechanical behaviour of a soft nip rolling contact	37–49
Gras, R.	The hydrodynamic phase of gearbox synchromesh operation: the influence of radial and circumferential grooves	107–116
Guida, D.	On the friction–position control relationship	129–137
Harrison, M. J. K.	Wear mechanisms of sandwich-type video heads	263–277
Hoogendoorn, R.	The design of lubricious oil-in-water emulsions	195–208
Hooke, C. J.	Elastohydrodynamic lubrication of soft viscoelastic materials in line contact	185–194
Huang, P.	Elastohydrodynamic lubrication of soft viscoelastic materials in line contact	184–194
Jacobson, B.	Loss of lubricant from oil-lubricated near-starved spherical roller bearings	51–66
Kato, T.	Experimental study of ultrathin liquid lubrication film thickness at the molecular scale	139–150
Koinkar, V. N.	Microtribological properties of hard amorphous carbon protective coatings for thin-film magnetic disks and heads	365–372
Korochkina, T. V.	An investigation of the hydrodynamic and mechanical behaviour of a soft nip rolling contact	37–49
Li, Y.	Degradation of perfluoropolyether lubricants on magnetic recording disks during sliding	279–288
Lim, C. H.	An investigation of the hydrodynamic and mechanical behaviour of a soft nip rolling contact	37–49
Lin, J.-R.	Static and dynamic behaviours of pure squeeze films in couple stress fluid-lubricated short journal bearings	29–36
Lin, J. F.	Tribological effects of roughness and running-in on oil-lubricated line contacts	209–222
Ma, M.-T.	Analysis of lubrication and friction for a complete piston-ring pack with an improved oil availability model. Part 1: circumferentially uniform film	1–15
Ma, M.-T.	Analysis of lubrication and friction for a complete piston-ring pack with an improved oil availability model. Part 2: circumferentially variable film	17–27
Matsuoka, H.	Experimental study of ultrathin liquid lubrication film thickness at the molecular scale	139–150
Mills, B.	Contact length in grinding. Part 1: contact length measurement	67–76
Mills, B.	Contact length in grinding. Part 2: evaluation in contact length models	77–85
Moore, A. J.	The behaviour of lubricants in elastohydrodynamic contacts	91–106
